

BIODIVERSITY BLITZ Challenge

Find all the WONDERS in your SOIL

Soil is a key part of biodiversity as it provides minerals, nutrients, water and a place for plants to grow. Soil also provides habitat for small creatures to live in. **Dig around to see if you can find what is living in your soil.**

It is important we take care of our soil and prevent it from drying out, so try covering bare soil with a thick layer of mulch or leaf litter.
